HENRY J. AUSTIN NURSE PRACTITIONER
RESIDENCY PROGRAM

12 MONTHS CAN CHANGE YOUR LIFE

AND THE LIVES
OF PEOPLE WHO
NEED QUALITY
HEALTHCARE.

THE HENRY J. AUSTIN NURSE PRACTITIONER RESIDENCY PROGRAM IS LOOKING FOR WOMEN AND MEN WHO WANT TO MAKE A DIFFERENCE.

COMPREHENSIVE
COMMUNITY
CARING

In just one year, you could be making a lasting difference in the lives of hundreds of people. The Henry J. Austin Nurse Practitioner Residency Program is looking for people interested in becoming a Nurse Practitioner focused on providing trauma informed integrated care to vulnerable and underserved populations in cities and rural areas as well as migrant health worker communities.

DOES THIS SOUND LIKE YOU?

YOU COULD BE THE NURSE PRACTITIONER THE WORLD NEEDS.

The HJAH Nurse Practitioner Residency Program is a highly selective, comprehensive, 12-month training program. It is designed to provide intensive, focused training in two areas: Patient Centered Medical Home (PCMH) model for primary care and Trauma Informed Integrated Care. The program offers significant rural/migrant health experience—and provides an opportunity for a one-year employment after the residency.

The program is specifically intended for Nurse Practitioners committed to developing careers as primary care providers in underserved communities.

We prepare Nurse Practitioners for high-performance health care.

Because the work of Nurse Practitioners can be complex, the program includes presentations from senior leadership as well as training in the trauma informed model of care, integrated collaboration based care, advanced access systems, planned care, the chronic care model, team-based care, clinical pharmacy, and using all forms of technology through telehealth. Residents will receive orientation that includes walking tours of local neighborhoods, community-based organizations, and community health center sites.

**The 2020-21 residency class begins in
July 2020 and concludes June 30, 2021.**

Training locations:

CompleteCare Health Network,
Henry J. Austin Health Center and
Zufall Community Health Center.

5 KEY COMPONENTS OF THE NURSE PRACTITIONER RESIDENCY PROGRAM:

- **Precepted Continuity Sessions** (4 per week)
These sessions are the cornerstone of the residency. Nurse Practitioner residents develop their own patient panel while having an expert primary care provider (MD or APRN) exclusively assigned to them.
- **Specialty Rotation** (2 per week for one month)
May include the following ten rotations in areas most commonly encountered in the setting of a community health center:
 - Behavioral Health
 - Women's Health
 - Clinical Pharmacy
 - Medication Assisted Treatment (MAT)
 - HIV/Hepatitis Management
 - Community/Population Health
 - Pediatrics
 - Chiropractic/Pain Management
 - Infectious Disease
 - Mobile Health Unit
- **Mentored Sessions** (2 per week)
Nurse Practitioner residents work as a member of a team at one of our community health centers. They see patients at the delegation of the primary care providers.
- **Didactic Education Sessions** (1 per week)
Formal learning on clinical challenges most commonly encountered in community health centers. Content is planned to correspond to the resident's clinical experiences. Training on the quality improvement model, including microsystems, facilitation, and leadership development.
- **Specialty Technology Training** (1 per week)
Nurse Practitioners learn to work with health information technology including telemedicine, video case conferencing, health information exchange, and e-consults.

Residents will receive ongoing multi-input evaluation component using qualitative and quantitative measures.

GOALS OF THE NURSE PRACTITIONER RESIDENCY PROGRAM:

- 1. Train new Nurse Practitioners to practice in a trauma informed way** by working in part of an integrated team with Behavioral Health, Clinical Pharmacy, Dental, HIV, Social Services, and more. Providing Nurse Practitioners with the clinical training necessary to serve as primary care providers in the community health center setting.
- 2. Increase access to quality primary care for underserved and special populations** by training Nurse Practitioners in a community health center residency program that prepares residents for full and autonomous expert care across all life cycles and in multiple settings.
- 3. Train new Nurse Practitioners to achieve a level of primary care** consistent with the National Academy of Medicine's principles of health care and the needs of vulnerable populations.
- 4. Improve the clinical skills, confidence, productivity, and job satisfaction of new Nurse Practitioners** who choose to work in underserved community settings— and contribute to employer satisfaction and workforce retention.
- 5. Increase the number of Nurse Practitioners ready to serve** in leadership roles in community health.
