ITGERS School of Nursing

Introduction

- Hypertension (HBP) is a worldwide epidemic
- According to CDC one-third of the US adults have HBP (Bakris et al., 2019)
- In 2019, WHO reported an estimated 1.13 billion people worldwide have hypertension (Carey & Whelton, 2018).
- According WHO, African American Adults have earlier onset of hypertension, greater hypertension comorbidities, and higher mortality than the other racial groups (Prins et al., 2016).
- African Americans have a higher prevalence of hypertension and have their blood pressure less controlled compared to other racial or ethnic groups (Carnethon et al., 2017).
- In 2016, the US spent \$3.2 trillion on healthcare out of which \$83.9 billion was spent on management and prevention of HTN (Kirkland et al., 2018).

Background & Significance

- HTN is a major contributing factor for cardiovascular disease, which is the leading cause of death and a major cause of disability worldwide (Nascimento et al., 2018)
- According to New Jersey State Health Assessment data (SHAD) in 2017, the prevalence of diagnosed hypertension among adults was 31.6% of which 65% were African Americans. Among the 65%, 33.5% were from Middlesex where the church is located (Cohen et al., 2019).

| | | ar Disease - High Blood Pressure | 1 | | |
|-----------------|--|--|--|---|--|
| | is Important? | | | | 8 |
| High blood p | ressure is a risk factor for cardiovascular disease (i.e | e., heart attack, heart failure, or stroke) and kidney failu | ure. | | |
| For adults wh | ho have high blood pressure, controlling it through lif | estyle modifications (i.e., diet and exercise) as well as | medications can help reduce the likelihood of deve | eloping cardiovascular disease or kidney failure. | |

Lifestyle Modification to Improve Hypertension Control Among African American Adults in a Local Church YIADOM AKUAMOAH – BOATENG DNP Chair: Mary DiGiulio, DNP, APN, FAANP, DNP Team Member: Mary C. Kamienski, PhD, APRN, FAEN, FAAN, CEN

Objective/ Aim

Aim:

- The purpose of this project is to implement lifestyle
- modifications including increased **Physical Activity** and dietary
- changes **DASH** diet to improve **HTN** control among AAA with
- HTN in a local church.

Objective:

- Follow the (DASH) diet eating plan, which emphasizes on increased consumption of fruit and vegetables, whole grains,
- low-fat dairy, nuts, poultry and fish, and decrease consumption
- of solid fats, added sugars, and sodium, potassium-rich foods,
- meal planning, and appropriate portion sizes of food.
- Increased Physical activities -Brisk walking, jogging, jumping rope, and running. Observing Covid-19 recommendations

Methodology

Design

Observational study design using pre-post design test of a convenience sample population of consented hypertensive African Americans selected from a local church in New Brunswick, New Jersey.

Setting

• Central Jersey, Middlesex County Area of New Jersey, data collected were reported electronically using zoom or email. Strictly observing the covid-19 protocols.

Study Population

- Convenience sample of 25 adults aged 18 and over, in a local church in New Brunswick in Middlesex County
- Inclusion criteria are men and women who self-reported African American race, who have been diagnosed with hypertension, on antihypertensive medications and able to read, understand, and speaks the English language, have a smart mobile device or computer with internet.
- **Exclusive criteria** are Pregnant women, Adults lacking decisional capacity, AAA who do not speak or understand English

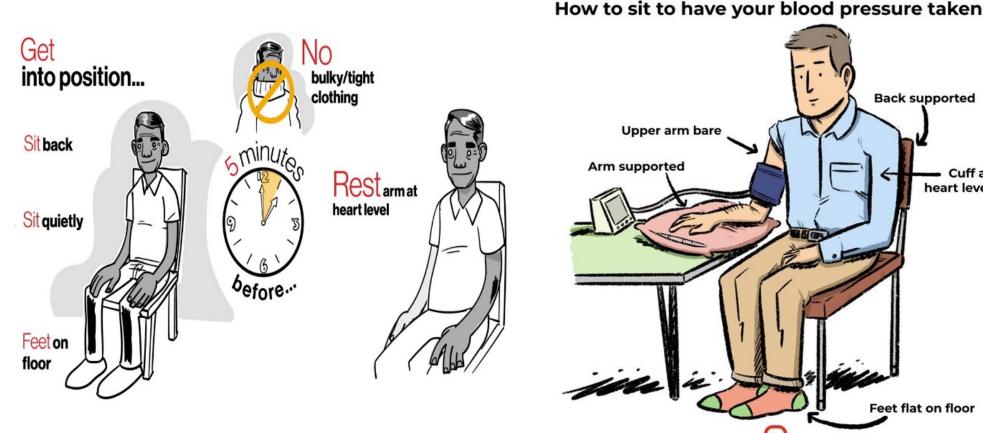

Data Analysis

- The sample size, mean, frequencies and percentiles were analyzed using a Descriptive statistics
- Parametric paired sample t-test was used to determined the mean difference of SBP and DBP for Pre-and Post intervention using SPSS statics (version 27)
- A p-value less than 0.05 to prove statistically significant

Intervention

Physical Activities

Cardiovascular or aerobic exercise such as:

- A Brisk walking for at least 30 mins a session, for 3-5 days/wk.
- Jogging for 20 minutes for 3-4 days a week.
- Biking or stationary cycling for 30 minutes a day, or three 10 minutes blocks of cycling.
- 1-mile-per-hour pace at desk-based treadmilling for at least 10 minutes or pedaled stationary bikes for at least 10 minutes every hour (Winzer et al., 2018).

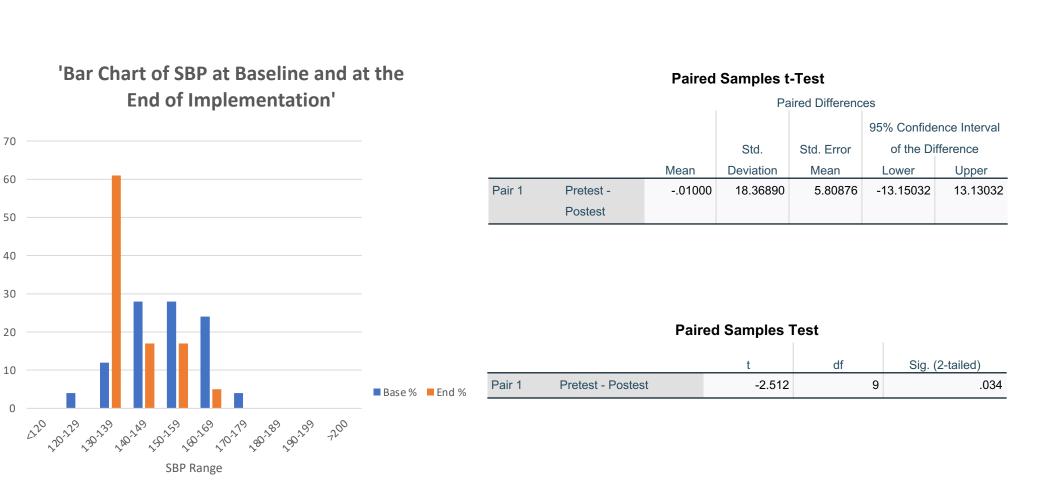

Following the DASH Eating Plan

| Food Group | Serving Sizes | Significance |
|---------------------------|--|---|
| Grains | 1slice / 1 oz dry cereal ½ cup cooked rice, pasta | Major source of energy and fiber |
| Vegetables | 1 cup raw leafy vegetable ½ cup cut-up or cooked veg ½ cup vegetable juice | Rich in K+, Mg and fiber |
| Fruits | 1 medium fruit ¼ cup dried fruit ½ cup fruit juice | Important source of K+, Mg, and fiber |
| Fat-free or milk products | 1 cup of milk or yogurt 1 ½ oz cheese | Major of Ca and protein |
| Lean Meat / Poultry/Fish | 1 egg, 1oz cooked M/P/F | Protein & Mg |
| Nuts /seeds / legumes | ½ cup nuts, 2 Tbsp peanut 2 Tbsp seeds, ½ cup legumes | Protein, Mg and fiber |
| Sweets & added sugars | 1Tbsp sugar, 1Tbsp jelly or jam ½ cup sorbet, gelatin 1 cup lemonade | Sweets should be low in fat |

Results

| Baseline SBP readings | | | | | | | |
|--------------------------|-------|-----|-----------|-----------|-------|-----------|-------|

Conclusion & Implications

conclusion

- From the paired sample t test the *p*-value {sig. (2-tailed)}
- = .034 which is < 0.05 meaning the null can be rejected.
- In conclusion there is a significant evidence to support that physical activities and DASH diet help improve
- hypertension control among African American with hypertension in the local church.
- Participants exhibits improved health condition less Cardiovascular, cerebrovascular risk.

Implications

7(11), e008731.

- **Clinical practice**: AAA with HTH on Antihypertensive meds should included non-pharmacological like physical activity and DASH eating.
- Health Care Policy: Awareness and seminars to educate AAA with Hypertension
- Quality and safety: promotion of low risk of
- cardiovascular, cerebrovascular, mortality, and morbidity. Promote a better health benefit and improve individual outcome
- **Economic :** Improved Blood Pressure control reduces the nation's financial burden.
